General Information:

The Georgia Voters' Perceptions and Priorities on Health Care: 2026 Polling Results survey was a live interviewer telephone survey conducted June 10-25, 2026 that included a total of 1,003 likely voters in Georgia. Likely general election voters were respondents who had voted in the 2024 general election and/or the 2022 general election and/or the 2026 statewide primary; who indicated they were currently registered to vote in Georgia; and who were *definitely* or *probably* going to vote in the 2026 general election. The survey was administered by the School of Public and International Affairs Survey Research Center at the University of Georgia. Interviews were conducted in English. A dual-frame statewide random sample consisting of approximately 90% cell phone numbers and 10% landline numbers was obtained through L2 (L2 is a sampling vendor that maintains a database constructed from state voter registration lists. Through commercial sources, phone numbers have been appended to the individual records (registrants) that make up these lists). The survey results were weighted using iterative proportional raking in order to ensure the sample was representative of the 2026 general electorate in terms of race, sex, age, education, and political party. The calculated margin of error for the total sample is +/-3.1 points at the 95% confidence level. This would mean that if 50% of respondents indicate a topline view on an issue, we can be 95% confident that the population's view on that issue is somewhere between 53.1% and 46.9%.
